

Leading La Jolla Surgical Practice Selects CHMB Solutions to Host Electronic Health Record

La Jolla, California January 31, 2008. CHMB Solutions, California's leading provider of outsourced business and clinical solutions for physician practices has announced that Advanced Surgical Associates of La Jolla will utilize CHMB to host the industry leading Touchworks Electronic Health Record (EHR) software. Touchworks is the flagship product for Allscripts (NASDAQ: MDRX) and was top rated selection for EHR solutions as indicated in the 2007 KLAS ratings.

By hosting Touchworks remotely, CHMB provides a simple, affordable means of delivering vital patient information to caregivers, anytime and anywhere, without the need to purchase servers or hire new IT personnel. This Application Service Provider (ASP) delivery model also speeds deployment of the technology and is becoming an increasingly important option for mid-size and independent physician practices.

Like many of their colleagues, the physicians of Advanced Surgical Associates want to focus on delivering healthcare while leaving information technology management to someone else. Group President and outgoing Chief of Staff for Scripps Memorial Hospital, Dana Launer, M.D., indicated that their decision to adopt the Touchworks solution was "based on the combination of advanced technical features made accessible and affordable through the ASP model offered by CHMB."

"Our state of the art colocation facility ensures that CHMB's servers and more importantly our customer's critical patient health records are disaster-proof, secure and accessible by authorized caregivers anywhere in the world." stated Isaac Nye, Director of Information Technology for CHMB Solutions. The Electronic Health Record functionality of the Touchworks solution automates everyday clinical tasks such as prescribing and refilling medications, ordering and reviewing tests, and documenting patient care.
